

Advanced Comfort Systems, Inc.

Important Indoor Air Quality Statement

In many ways Indoor Air Quality (IAQ) is a topic that both the consumer and HVAC contractor have not given its due importance in the past. We sense that this is a moment in time when current events will change these attitudes. We want to make sure our customers have the information and resources available to them to make the best investments and decisions. As our clients and customers, we consider you to be our extended family and believe that what is best for you will ultimately be best for our employees and business.

There are plenty of studies showing that the air inside our homes and workplaces is often far more polluted than the air outside. The EPA and medical journals have plenty of published data on this topic. As an industry we have effective tools to improve our indoor air quality. Those with allergies and/or asthma or those finding they are fighting colds and flus more often can benefit from IAQ products but so can everyone else. We can share our experience and knowledge to help you when you are ready to invest in better indoor air quality.

In this current time, we need to emphasize IAQ is only part of our environment. Our products will address the stuff floating around in the air we breathe. This is very important, but it is not everything. IAQ does not sanitize the surfaces we touch or person to person contact for instance. An investment in IAQ should be made to improve health of the air we breathe and not as a cure to a virus or medical condition. It is part of the equation to better health but is not the whole answer.

We have specific products that will address humidity levels in your home. UV-C treatment items that will sanitize the air flowing through your HVAC system. New air-purification systems that brings technology used in operating rooms to your home. We also have time right now to help you make a great decision and get the items installed for your long-term benefit.
